Rebuilding with Confidence

March 2016

The Rainy Season is Here! G.S. Jones Introduces the Newest Technology

to fight bacteria, odors, and mold spores

SteraMist™

Steramist is a complete room disinfecting system that is EPA registered for use as a hospital healthcare disinfectant. This product disinfects MRSA, C.Diff, H1N1. Developed in response to the anthrax attacks after 9-11, Steramist can be used in homes to help with allergies, bacteria, and mold spores. Setting up a spring and fall cleaning plan with Steramist will help keep your family healthier throughout the year.

- Destroys proteins, carbohydrates and lipids on contact (via oxidation) which results in killing bacteria, bacteria spores, mold spores including the inactivation of viruses.
- Reacts with chemical agents by breaking their double bond and neutralizing them via oxidation. The same is true with weaponized biological agents as they are neutralized via oxidation.
- The by-products of the activated hydrogen peroxide are oxygen and water and by-products are far safer to handle than those left by conventional methods

Versatility

- Direct spray that disinfects all surfaces including medical equipment and electronic devices
- ROS fog that fills an enclosed space to disinfect both air and surfaces

Efficacy

- Fast acting biological deactivation of problem microorganisms.
- EPA registered (registration number 90150-2) for use as a hospital-healthcare disinfectant, effective against MRSA, C. DIFF, and the H1N1 Virus.

Advantages

- Reduces treatment time
- Not affected by humidity
- Safe for use on portable equipment such as IV stands, beds, exteriors of sample jars, the outside of waste bags, cell phones, computers, etc.

With spring right around the corner here are a few tips to be ready for possible flooding. G.S. Jones is prepared to assist when the flooding gets too bad to handle by the homeowner or business owner. Having a disaster plan in place is essential to handle disasters as quickly and efficiently as possible.

- Listen to area radio and television stations and a NOAA Weather Radio for possible flood warnings and reports of flooding in progress or other critical information from the National Weather Service (NWS)
- Be prepared to evacuate at a moment's notice.

- When a flood or flash flood warning is issued for your area, head for higher ground and stay there.
- Stay away from floodwaters. If you come upon a flowing stream where water is above your ankles, stop, turn around and go another way. Six inches of swiftly moving water can sweep you off of your feet.
- If you come upon a flooded road while driving, turn around and go another way. If you are caught on a flooded road and waters are rising rapidly around you, get out of the car quickly and move to higher ground. Most cars can be swept away by less than two feet of moving water.
- Keep children out of the water. They are curious and often lack judgment about running water or contaminated water.
- Be especially cautious at night when it is harder to recognize flood danger.
- Because standard homeowner's insurance doesn't cover flooding, it's important to have protection from the floods associated with hurricanes, tropical storms, heavy rains and other conditions that impact the U.S.
